Totals may not sum due to rounding

*.. = not available

** = 0 or rounded to zero

Statistical Robustness ¹		
0 ≤ CV < 5	Estimates are considered	highly robust
5 ≤ CV < 10	Estimates are reasonably	robust
10 ≤ CV < 20	Estimates are considered	less robust
CV ≥ 20	Estimates are not considered	robust for practical purposes

Notes:

1. Standard error is an estimate of the margin of error associated with a sample survey. The coefficient of variation (CV) indicates the robustness of each estimate. It is defined as:

$$\% = \frac{\text{standard error}}{\text{estimate}} \times 100$$

2. CI +/- is the upper(+) and lower(-) 95% confidence limits. It is defined as:

$$1.96 \times \text{standard error}$$

3. Estimates are based on the Annual Population Survey (APS) which is the Labour Force Survey (LFS) plus various sample boosts. APS and LFS data to 2008-based population estimates and projections. Tables published from the year ending September 2009 have been weighted using these estimates prior to this were weighted using the 2006-based estimates and projections and have not been revised. Analysis shows that there is no discernable difference between the two tables.

4. It should be noted that the LFS :-

- * excludes students in halls who do not have a UK resident parent
- * excludes people in most other types of communal establishments (eg hotels, boarding houses, hostels, mobile home sites, etc)
- * is grossed to population estimates of those living in private households that only include migrants staying for 12 months or more. An adjustment is made for those who live in some NHS accommodation and halls of residence whose parents live in the UK. For this reason the sum of those born in the UK and outside the UK may not agree with the published population estimate.

5. The LFS weighting does not adjust for non-response bias by the country of birth variable.
