Notes:

1. Standard error is an estimate of the margin of error associated with a sample survey. The coefficient of variation (CV) indicates the robustness of each estimate. It is defined as:

$$\% = \frac{\text{standard error}}{\text{estimate}} \times 100$$

2. CI+/- is the upper(+) and lower(-) 95% confidence limits. It is defined as:

$$1.96 \times \text{standard error}$$

3. Estimates are based on the Annual Population Survey (APS) which is the Labour Force Survey (LFS) plus various sample boosts. APS estimates have now been grossed to 2008-based population estimates and projections. Tables published from the year ending September 2009 have been based on these estimates. Tables published prior to this were weighted using the 2006-based estimates and projections and have not been revised. There is no discernible discontinuity in these tables.

4. It should be noted that the LFS :-

- * excludes students in halls who do not have a UK resident parent
- * excludes people in most other types of communal establishments (eg hotels, boarding houses, hostels, mobile home sites,
- * is grossed to population estimates of those living in private households that only include migrants staying for 12 months or more. An

5. The LFS weighting does not adjust for non-response bias by the country of birth variable.

6. County Durham UA comprises the former Durham county.

7. Northumberland UA comprises the former Northumberland county.

8. Cheshire East UA comprises part of the former Cheshire county (Congleton, Crewe and Nantwich and Macclesfield districts).
